NEW QUESTION 6

- (Exam Topic 1)
A daily backup job for seven Hyper-V VMs has been configured at the main site, keeping 14 days' worth of backup files. They want to get a copy of the VM backups to a repository at the disaster recovery site. They want to keep six months' worth of backup files at the disaster recovery site. They also need to be able to restore the VMs to any given day within two months and any given week within six months. How should a backup copy job be configured to meet these requirements?

A. Use periodic copy (pruning) mode, keeping 180 days of retention.
B. Use immediate copy (mirroring) mode, keeping 62 days of retention and 26 weekly GFS restore points.
C. Use periodic copy (pruning) mode, keeping 62 days of retention and six monthly GFS restore points.
D. Use immediate copy (mirroring) mode, keeping 180 days of retention.

Answer: B

Explanation:
According to the Veeam Backup & Replication user guide1, you can use a long-term retention policy (GFS) keep backup files for longer periods of time. GFS stands for grandfather-father-son and refers to a backup rotation scheme that allows you to create weekly, monthly, quarterly and yearly restore points12. Therefore, if you want to be able to restore the VMs to any given day within two months and any given week within six months, you should use a GFS policy with 62 days of retention and 26 weekly GFS restore points. The simplest configuration would be an immediate copy (mirroring) mode with these settings (option B).

C. Restore the files using the "Overwrite" functio
D. Original files will be renamed.
E. Restore the files using the "Hold" functio
F. The director can then determine the status of the original and restored files.
G. Restore the files using the "Keep" functio
H. Original files will be untouched

Answer: D

Explanation:
According to the Veeam Backup & Replication user guide1, you can use the Guest File Restore wizard to restore files and folders from VM guest OSes that run Linux or other non-Windows OSes2. The wizard allows you to choose how to handle situations when restored files already exist on the target location3. Therefore, if you want to restore the folder of traffic photos to their original location and do not want to lose the original files, you should use the Keep function. This function will preserve original files on disk and w not overwrite them with restored files

NEW QUESTION 20
- (Exam Topic 1)
A file on a Windows VM hosted on vSphere is corrupted and must be restored. VMware tools are installed and up to date on the VM. For some reason, the Veeam mount server cannot connect to the VM through the network. Which of the following restore methods provides the fastest restore (RTO)?

A. Run Veeam file restore wizard and let it restore through VIX.
B. Start an Instant VM Recovery session and log on into the restored image to copy/paste the file to restore.
C. It is impossible to restore the file on the VM if the mount server cannot reach it through the network.
D. Run Veeam file restore wizard and use the "copy to" to download the file locally in a shared folder.

Answer: A

Explanation:

According to the Veeam Backup & Replication user guide1, you can use the File Level Restore wizard to restore files and folders from VM guest OSes that run Windows2. The wizard allows you to choose how to access the VM guest OS: through network or through VIX2VIX is a VMware API that enables programmatic access to virtual machine operations3.

Therefore, if you want to restore a file on a Windows VM hosted on vSphere and the mount server cannot connect to the VM through the network, you can use VIX as an alternative method of access2. This will allow you to restore the file directly to its original location without downloading it locally or starting an Instant VM Recovery session.

NEW QUESTION 21
- (Exam Topic 1)
Veeam Backup & Replication is currently configured to back up different workloads: Windows VMs on vSphere and Linux VMs on vSphere. A secondary copy of all the backups including transaction logs must be created. Which of the following backup copy job configurations is the simplest?

A. A single "periodic copy" backup copy job
B. A single "immediate copy" backup copy job
C. Two "immediate copy" backup copy jobs
D. Two "periodic copy" backup copy jobs

Answer: B

Explanation:
According to the Veeam Backup & Replication best practice guide1, a new copy job mode was added
called immediate copy. This mode immediately starts the backup copy job as soon as restore points appear in the repository. It also provides the ability to copy SQL and Oracle log backups which is not possible with
traditional periodic backup cop1y2.
Therefore, if you want to create a secondary copy of all the backups including transaction logs, you should use an immediate copy backup copy job. The simplest configuration would be a single immediate copy backup copy job for all workloads (option B)
