NEW QUESTION 91
- (Exam Topic 3)
HOTSPOT
Your network contains an on-premises Active Directory domain named contoso.com that syncs to an Azure Active Directory (Azure AD) tenant.
You have an Azure subscription that contains an Azure Virtual Desktop host pool. You create an Azure Storage account named storage1.
You need to use FSLogix profile containers in storage1 to store user profiles for a group named Group1. The solution must use the principle of least privilege. What should you include in the solution? To answer, select the appropriate options in the answer area.

For storage1:

| Join to the contoso.com domain. |
| Configure a shared access signature (SAS). |
| Enable encryption by using customer-managed keys. |

NEW QUESTION 93
- (Exam Topic 3)
Your network contains an on-premises Active Directory domain that syncs to an Azure Active Directory (Azure AD) tenant. The domain contains the domain controllers shown in the following table.

Name	Network location	IP address	Configuration
Server1	On-premises datacenter	10.10.1.1	Domain controller, DNS server
Server2	Azure virtual network named VNET1	10.20.1.1	Domain controller, DNS server

The DNS servers are configured to forward requests to an external DNS service.
You create a new virtual network named VNET2 that is peered to VNET1 and has gateway transit enabled. You plan to implement an Azure Virtual Desktop host pool in VNET2. The session hosts will be joined to the
Active Directory domain.
You need to configure DNS to meet the following requirements:
≫ Ensure that azure Virtual Desktop remains operational if a DNS server fails.
≫ Minimize administrative effort.
What should you configure?

A. the DNS settings of VNET2 to use Server2 and Served
B. the DNS settings of VNET2 to use the Azure DNS service
C. the DNS settings of the virtual machines to use Server2 and Server1
