

## Exam Questions AZ-600

Configuring and Operating a Hybrid Cloud with Microsoft Azure Stack Hub

<https://www.2passeasy.com/dumps/AZ-600/>

### NEW QUESTION 1

- (Exam Topic 1)

You need to register the northcentralus region.

How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

<div><div></div><div>Register-AzsEnvironment</div><div>Register-AzureRmResourceProvider</div><div>set-AzContext</div><div>Set-AzsRegistration</div></div>	<div>-PrivilegedEndpointCredential \$CloudAdminCred -PrivilegedEndpoint \$PrivilegedEndpoint</div>
<div>-BillingModel</div> <div><div></div><div>Capacity</div><div>Development</div><div>PayAsYouUse</div><div>Ruggedized</div></div>	<div>-RegistrationName \$RegistrationName</div>

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-registration?view=azs-2008&tabs=az1%2Caz>

### NEW QUESTION 2

- (Exam Topic 1)

You need to implement the App Service infrastructure to address the current issues and support the planned changes for Azure Functions in Boston.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To implement the planned changes, deploy:

Web worker – dedicated instances – medium

Web worker – dedicated instances – small

Web worker – shared instances

To address the current issues, scale out the following App Service role:

Controller

Front End

Worker

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Table Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-app-service-capacity-planning?view=azs-200>

### NEW QUESTION 3

- (Exam Topic 1)

You need to implement the management app. The solution must meet the technical requirements. What should you use?

A. a PowerShell session to litwareinc.com

B. a browser session to litwareinc.com

C. a PowerShell remoting session to the PEP

D. a browser session to the administrator portal

Answer: D

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-manage-portals?view=azs-2008>

### NEW QUESTION 4

- (Exam Topic 2)

You schedule a planned maintenance window.

You need to perform an Azure Stack Hub update in the dev1 region. The solution must meet the technical requirements.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the

correct order.

### Actions

### Answer Area

Complete the activities identified in the Azure Stack Hub update activity checklist.

From the administrator portal, start the update process

From a privileged endpoint (PEP) session, run the `Stop-AzureStack` and `Start-AzureStack` cmdlets.

Download the required package and import the package to the respective storage account in the dev1 region.

Notify the users of the planned maintenance.

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

Graphical user interface, text, application, chat or text message Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-updates?view=azs-2008>

#### NEW QUESTION 5

- (Exam Topic 2)

You remove all the workloads from the int1 region and change the registration model to capacity.

You prepare additional Azure AD tenants for each partner. You need to configure multitenancy.

Which two actions should you perform for each guest tenant? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Run the `Register-AzSWWithMyDirectoryTenant` cmdlet and specify `https://management.int1.northwind.com` as the endpoint.
- B. Run the `Register-AzSGuestDirectoryTenant` cmdlet and specify `https://management.int1.northwind.com` as the endpoint.
- C. Run the `Register-AzSGuestDirectoryTenant` cmdlet and specify `https://adminmanagement.int1.northwind.com` as the endpoint.
- D. Change the registration model to pay-as-you-use.
- E. Run the `Register-AzSWWithMyDirectoryTenant` cmdlet and specify `https://adminmanagement.int1.northwind.com` as the endpoint.

**Answer:** AC

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-enable-multitenancy?view=azs-2008>

#### NEW QUESTION 6

- (Exam Topic 2)

You need to change the DNS forwarder of the priv1 region.

Which two actions should you perform? Each correct answer presents part of the solution?

NOTE: Each correct selection is worth one point.

- A. Run the `Register-CustomDnsServer` cmdlet
- B. Run the `Add-DnsServerForwarder` cmdlet
- C. Run the `Set-AzsDnsForwarder` cmdlet
- D. Connect to the administrator management endpoint of the priv1 region
- E. Connect to privileged endpoint (PEP) of the priv1 region

**Answer:** CE

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-configure-dns?view=azs-2008>

#### NEW QUESTION 7

- (Exam Topic 2)

You need to resolve the performance issue reported by the users in the priv1 region. What should you do?

- A. Redeploy the virtual machines to a new Azure Stack Hub node
- B. Install the NVIDIA drivers on the virtual machines
- C. Install the AMD drivers on the virtual machines
- D. Add an additional scale unit node

**Answer:** C

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/n-series-amd-driver-setup>

**NEW QUESTION 8**

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that is disconnected from the Internet.

You need to make a new image available in Azure Stack Hub Marketplace in the disconnected environment. From a computer that has Internet access, you download all the required tools.

Which four actions should you perform in sequence next? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run the <code>Select-AzsMarketplaceItem cmdlet</code>	
Run the <code>Install-Module -Name Azs.Syndication.Admin</code> command	
Run the <code>Import-AzsMarketplaceItem cmdlet</code>	
Run the <code>Export-AzsMarketplaceItem cmdlet</code>	
Sign in to the Azure subscription used to register Azure Stack Hub	

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-download-azure-marketplace-item?view=azs>

**NEW QUESTION 9**

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that uses an Active Directory Federation Services (AD FS) identity provider and capacity-based billing.

You have a plan named Plan1 that has the following quota configurations for Microsoft.Compute:

- > Maximum number of Availability Sets: 10
- > Maximum number of virtual machines: 50
- > Maximum number of virtual machine cores: 100
- > Maximum number of virtual machine scale sets: 10

You link two offers named Offer1 and Offer2 to Plan1.

Two user subscriptions named Customer1 and Customer2 are created based on Offer1. A user subscription named Customer3 is created based on Offer2.

Customer1 receives a warning that it provisioned 50 virtual machines.

You need to ensure that Customer1 can provision an additional 25 virtual machines within its existing subscription. The solution must NOT affect the quotas of the other user subscriptions.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add NewPlan as an add-on to Offer1
- B. Create a new plan named NewPlan that has the maximum number of virtual machines quota set to 75
- C. Add NewPlan to the Customer1 user subscription
- D. Create a new plan named NewPlan that has the maximum number of virtual machines quota set to 25
- E. Update the quota for Microsoft.Compute in Plan1 to have the maximum number of virtual machines set to 75
- F. Create a new offer named Offer3 based on Plan1 and create a new user subscription for Customer1 by using Offer3

**Answer:** AD

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/service-plan-offer-subscription-overview?view=azs-2008>

<https://docs.microsoft.com/en-us/azure-stack/operator/create-add-on-plan?view=azs-2008>

**NEW QUESTION 10**

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that was recently moved to a new datacenter and powered on. You need to verify whether the infrastructure components are fully operational.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Run the Start-AzureStack cmdlet
- B. Run the Test-AzureStack cmdlet
- C. Connect to the privileged endpoint (PEP)
- D. Connect to the administrator portal
- E. Run the Get-AzureStackStampInformation cmdlet

**Answer:** ABC

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-diagnostic-test?view=azs-2008>

**NEW QUESTION 10**

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that has 12 nodes. All the nodes run the latest firmware available from the OEM. The integrated system also has a hot spare node.

You receive an alert concerning the hardware on one of the nodes.

You need to replace the node as soon as possible. The solution must minimize disruptions to user workloads. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

**Answer Area**

From the user portal, run the Repair action.

Replace the node.

From a privileged endpoint (PEP) session, run the `Stop-AzureStack` cmdlet.

From the administrator portal, stop the node.

From the user portal, stop all the virtual machines that use unmanaged disks.

From the administrator portal, run the Repair action.

From the administrator portal, shut down the node.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Graphical user interface, text, application Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-replace-node?view=azs-2008> <https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-node-actions?view=azs-2008&tabs=az1> d5

**NEW QUESTION 15**

- (Exam Topic 3)

You have an Azure Stack Hub integrated system and an offer to which users can subscribe.

You need to prevent users and operators from creating new user subscriptions based on the offer without affecting the existing user subscriptions.

What should you do?

- A. Change the offer state to Private.
- B. Change the offer state to Decommissioned.
- C. Change the offer state to Public.
- D. Delete the offer and create a new private offer.

Answer: B

Explanation:

Reference:  
https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-create-offer?view=azs-2008

NEW QUESTION 20

- (Exam Topic 3)  
You have three Azure Stack Hub integrated systems that use the same Azure Active Directory (Azure AD) tenant named contoso.com as their identity provider. The integrated systems are deployed in Chicago, New York, and Seattle. The region name of each integrated system corresponds to the city in which the system is deployed.  
When reviewing alerts in the integrated system in Chicago, you receive an alert indicating that the home directory requires an update.  
From the Azurestack-tools-master/identity folder, you import the AzureStack.Identity.psm1 module. How should you complete the command to update the home directory? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

Answer Area

\$adminResourceManagerEndpoint =

https://adminmanagement.chicago.contoso.com  
https://adminportal.chicago.contoso.com  
https://management.chicago.contoso.com

\$homeDirectoryTenantName =

chicago.contoso.com  
chicago.onmicrosoft.com  
contoso.com

Update-AzSHomeDirectoryTenant -AdminResourceManagerEndpoint

\$adminResourceManagerEndpoint -DirectoryTenantName

\$homeDirectoryTenantName -Verbose

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application, email Description automatically generated  
Reference:  
https://github.com/Azure/AzureStack-Tools/blob/master/Identity/README.md

NEW QUESTION 22

- (Exam Topic 3)  
You deploy an Azure Stack Hub integrated system that contains an Azure App Service deployment. The integrated system uses an Azure Active Directory (Azure AD) identity provider.  
You need to provide users with the ability to deploy App Service web apps directly from their GitHub repositories.  
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Register an Azure AD application
- Create a GitHub action
- Modify the Source control configuration settings of the App Service resource provider
- Register a GitHub application
- Create a GitHub account

Answer Area

>

<

↑

↓

- A. Mastered

B. Not Mastered

**Answer:** A

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-app-service-configure-deployment-sources?vi>

### NEW QUESTION 23

- (Exam Topic 3)

You have an Azure Stack Hub integrated system.

You are an operator, and you have read access to a user subscription named Fabrikam1.

Users in Fabrikam1 request help creating a custom role-based access control (RBAC) role based on an existing built-in Azure role.

You connect to the Azure subscription, create the respective role definition, and save the role definition as a JSON file.

Which three actions should you perform to create the custom role? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Request owner access to the user subscription.

B. Modify the custom role definition to include the target subscription ID as an AssignableScope, set the IsCustom field to true, and set Id to Null.

C. Connect to the administrator management endpoint and run the New-AzureRmRoleDefinition cmdlet.

D. Connect to the user management endpoint and run the New-AzureRmRoleDefinition cmdlet.

E. Modify the custom role definition to include the target default provider subscription ID as an AssignableScope, set the IsCustom field to true, and set Id to Null.

**Answer:** ABD

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/role-based-access-control/tutorial-custom-role-powershell>

### NEW QUESTION 24

- (Exam Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to install an update to an Azure Stack Hub integrated system.

You need to verify whether the integrated system is healthy, and whether you can apply the update. You must achieve the goal as quickly as possible.

Solution: From a privileged endpoint (PEP) session, you run Test-AzureStack –Group "Default".

Does this meet the goal?

A. Yes

B. No

**Answer:** B

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-diagnostic-test?view=azs-2008>

### NEW QUESTION 29

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that has syslog forwarding configured. You need to remove syslog forwarding and the associated certificate.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

#### Actions

#### Answer Area

Connect to the administrator portal

Export the client certificate

Select Region management

Connect to the privileged endpoint (PEP)

Run the Set-SyslogClient cmdlet

Run the Set-SyslogServer cmdlet

A. Mastered

B. Not Mastered

**Answer:** A

Explanation:

Reference:  
<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-integrate-security?view=azs-2008>

NEW QUESTION 31

- (Exam Topic 3)  
You have an Azure Stack Hub integrated system. You plan to install the Event Hubs resource provider.  
You purchase a public wildcard certificate that has a subject name of \*.eventhub.chicago.contoso.com. The path to the certificate is C:\Certificates\ssl.pfx. You need to validate whether the certificate meets the requirements of Azure Event Hubs.  
Which two actions should you perform? Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.

- A. Install the AzureStack.Identity PowerShell module
- B. Rename the certificate file as Eventhub.pfx
- C. Run the Invoke-AzsHubEventHubsCertificateValidation cmdlet
- D. Run the Invoke-AzsHubDeploymentCertificateValidation cmdlet
- E. Install the Microsoft.AzureStack.ReadinessChecker Powershell module
- F. Convert the Ssl.pfx file to a CER file

Answer: DE

Explanation:

Reference:  
<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-validate-pki-certs?view=azs-2008>

NEW QUESTION 34

- (Exam Topic 3)  
You have an Azure Stack Hub integrated system.  
You need to ensure that you can recover managed and unmanaged disks that are deleted from user subscriptions.  
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Modify the retention period for deleted storage accounts

Create a storage account that uses the Cool access tier

Open the configurations for the Storage resource provider

Connect to the administrator portal

Connect to the user portal

Connect to the privileged endpoint (PEP)

Open the configurations for the Compute resource provider

>

<

↑

↓

- B. Not Mastered

Answer: A

Explanation:

Reference:  
<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-manage-storage-accounts?view=azs-2008>

NEW QUESTION 38

- (Exam Topic 3)  
You have an Azure Stack Hub integrated system that is disconnected from the Internet. The integrated system is registered to an Azure Active Directory (Azure AD) tenant named contoso.com.  
You need to download the latest Ubuntu image for Azure Stack Hub Marketplace.  
How should you complete the PowerShell script? To answer, drag the appropriate cmdlets to the correct targets. Each cmdlet may be used once, more than once, or not at all. You may need to drag and split the bar between panes to scroll to view content.  
NOTE: Each correct selection is worth one point.

## Answer Area

	▼	-Environment AzureCloud -Tenant 'contoso.com'

Answer: A

### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-download-azure-marketplace-item?view=azs>

## NEW QUESTION 41

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that connects to the Internet.

You attempt to download an image as shown in the Add from Azure exhibit. (Click the Add from Azure tab.)

Microsoft Azure Stack Hub - Administration

Dashboard > Marketplace management > Marketplace items > Add from Azure > [smalldisk] Windows Server 2019 Datacenter-Bring your own license

[smalldisk] Windows Server 2019 Datacenter-Bring your own license

You already have the same product with a different billing model downloaded. Downloading this product will conflict with the existing product. Delete the existing product before downloading the new version.

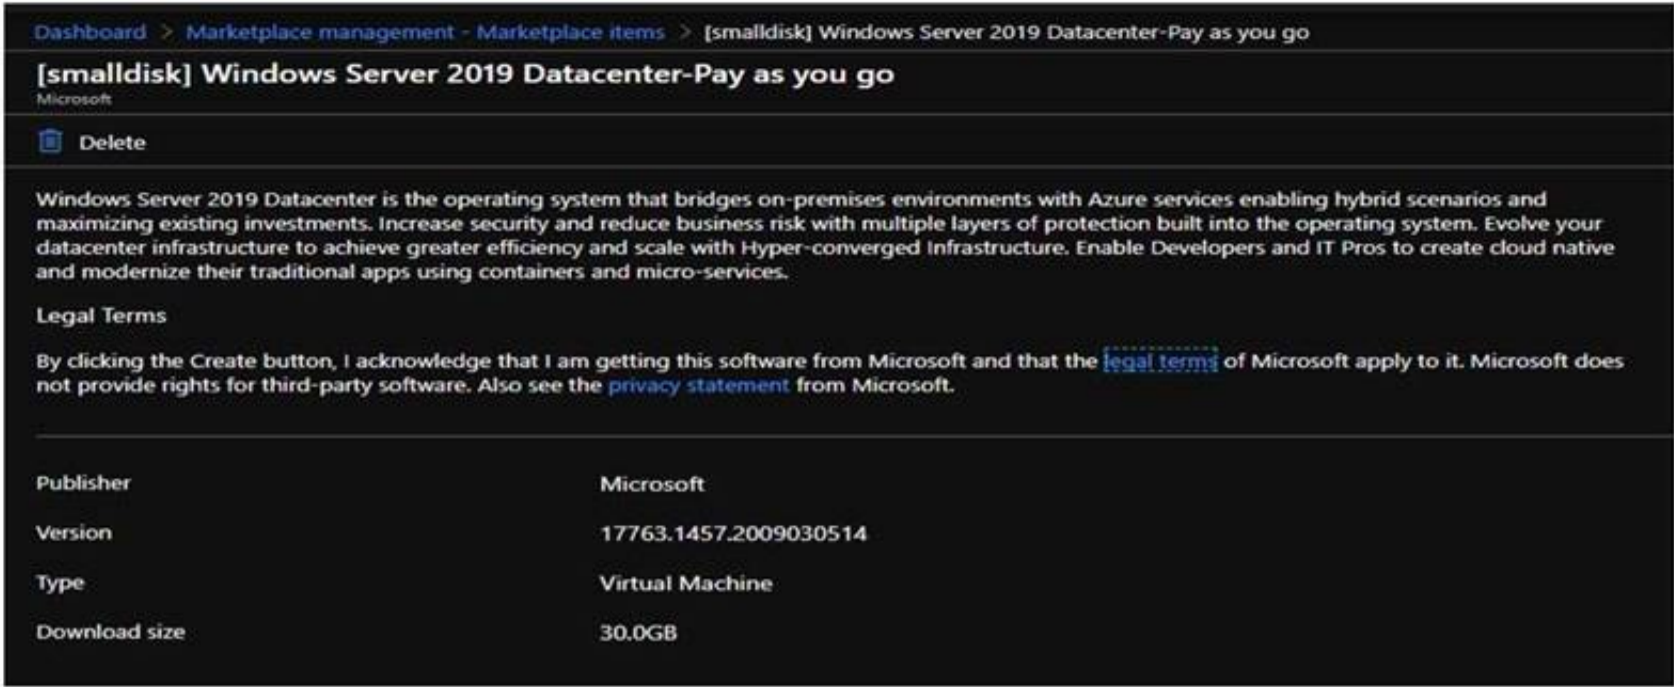

Windows Server 2019 Datacenter is the operating system that bridges on-premises environments with Azure services enabling hybrid scenarios and maximizing existing investments. Increase security and reduce business risk with multiple layers of protection built into the operating system. Evolve your datacenter infrastructure to achieve greater efficiency and scale with Hyper-converged infrastructure. Enable Developers and IT Pros to create cloud native and modernize their traditional apps using containers and micro-services.

https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-windows-server-faq?view=azs-2102&tabs=az

NEW QUESTION 43

- (Exam Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack Hub integrated system that connects to the Internet. The integrated system uses an Enterprise Agreement (EA) for licensing.

You are creating an Azure Resource Manager template to generate a marketplace item for a virtual machine that runs Windows Server 2019 Datacenter and a custom application.

You need to ensure that Windows Server is licensed by using the bring-your-own-license model. Solution: You add licenseType: None to the Azure Resource Manager template.

Does this meet the goal?

- A. Yes  
B. No

Answer: B

Explanation:

Reference:

https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-windows-server-faq?view=azs-2008&tabs=az

#### NEW QUESTION 47

- (Exam Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to install an update to an Azure Stack Hub integrated system.

You need to verify whether the integrated system is healthy, and whether you can apply the update. You must achieve the goal as quickly as possible.

Solution: From the administrator management endpoint, you run Test-AzureStack –Group "UpdateReadiness".

Does this meet the goal?

A. Yes

B. No

**Answer: B**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-diagnostic-test?view=azs-2008>

#### NEW QUESTION 48

- (Exam Topic 3)

Which three components are required to configure an Azure Stack Hub infrastructure backup? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. an SMB file share in the trusted network perimeter

B. credentials that have write access to storage

C. an Azure Blob storage account

D. an encryption certificate

E. an SMB file share in Azure

**Answer: ABD**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-backup-reference?view=azs-2008>

#### NEW QUESTION 52

- (Exam Topic 3)

You have an Azure Stack Hub integrated system that is not yet in production and has no workloads running. You configure the Infrastructure Backup Service, and you complete a backup.

You need to recommend a method to verify the restore process once the integrated system is in production. What should you recommend?

A. From the administrator portal, restore the domain controller backup to the default provider subscription and ensure that the domain controller starts successfully.

B. Run Get-FileIntegrity against the infrastructure backup data files stored in the file share.

C. Install the Azure Stack Development Kit (ASDK) and select the infrastructure backup data as the configuration during the installation.

D. Instruct the IT team to redeploy the integrated system in restore mode by using the backup data.

**Answer: C**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/asdk/asdk-validate-backup?view=azs-2102>

#### NEW QUESTION 55

- (Exam Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack Hub integrated system that connects to the Internet. You need to update the Azure Event Hubs service.

Solution: From the Updates blade of the administrator portal, you select the latest update in the infrastructure section.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/resource-provider-apply-updates?view=azs-2008>

#### NEW QUESTION 59

- (Exam Topic 3)

You are planning the deployment of two Azure Stack Hub integrated systems that will be located in Seattle and Redmond, respectively.

Workloads will run on infrastructure as a service (IaaS) virtual machines that have a static IIS web front-end and a Microsoft SQL Server 2019 cluster backend for database storage.

You plan to leverage Azure Traffic Manager to direct DNS requests to the integrated system in Seattle by default and use the Redmond integrated system in the event of a disaster.

What should you use to replicate application consistent database changes to the Redmond site?

- A. Hyper-V Replica
- B. Azure Blob storage replication
- C. SQL Server replication
- D. Azure SQL Database replication

**Answer:** C

**Explanation:**

Reference:

<https://azure.microsoft.com/en-gb/blog/protecting-applications-and-data-on-azure-stack/>

#### NEW QUESTION 60

- (Exam Topic 3)

You plan to deploy an Azure Stack Hub integrated system that will use an Azure Active Directory (Azure AD) identity provider.

You obtain certificates for the deployment.

You need to ensure that the certificates meet the prerequisites for Azure Stack Hub. Which PowerShell cmdlet should you run?

- A. Invoke-AzsHubDeploymentCertificateValidation
- B. Test-Certificate
- C. ConvertTo-AzsPFX
- D. Get-PfxCertificate
- E. New-AzsHubDeploymentCertificateSigningRequest

**Answer:** A

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-validate-pki-certs?view=azs-2008>

#### NEW QUESTION 61

- (Exam Topic 3)

You have an Azure Stack Hub integrated system.

You need to update the integrated system to use a non-Windows NTP service that has a host name of ntp1.contoso.com.

How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

#### Answer Area

<div> <div></div> <div> <div>Get-AzSTimeSource</div> <div>Reset-DatacenterintegrationConfiguration</div> <div>Set-AzsTimeSource</div> <div>Set-Culture</div> <div>Set-Telemetry</div> <div>Set-TimeZone</div> </div> </div>	-TimeServer	<div> <div></div> <div> <div>"ntp1.contoso.com"</div> <div>"ntp1.contoso.com,0x0"</div> <div>"ntp1.contoso.com,0x8"</div> </div> </div>	-resync
---	-------------	---	---------

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-configure-time?view=azs-2008>

#### NEW QUESTION 66

- (Exam Topic 3)

You plan to deploy a highly available Azure App Service resource provider to an Azure Stack Hub integrated system.

You need to ensure that the App Service resource meets the prerequisites. The solution must minimize costs. Which two resources should you deploy? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a highly available Microsoft SQL Server 2019 instance in the default provider subscription
- B. a highly available file server in a dedicated user subscription
- C. a highly available file server in the default provider subscription
- D. a highly available Microsoft SQL Server 2019 instance in a dedicated user subscription
- E. a single file server in the default provider subscription
- F. a single Microsoft SQL Server 2019 instance in the default provider subscription

**Answer:** AC

#### NEW QUESTION 67

- (Exam Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack Hub integrated system that connects to the Internet. The integrated system uses an Enterprise Agreement (EA) for licensing.

You are creating an Azure Resource Manager template to generate a marketplace item for a virtual machine that runs Windows Server 2019 Datacenter and a custom application.

You need to ensure that Windows Server is licensed by using the bring-your-own-license model. Solution: You remove the licenseType section from the Azure Resource Manager template. Does this meet the goal?

A. Yes

B. No

**Answer: B**

#### NEW QUESTION 69

- (Exam Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack Hub integrated system.

The security department at your company wants a list of all the users who can manage the integrated system from the privileged endpoint (PEP).

You need to create the list.

Solution: From the Azure portal, you open the Azure Active Directory blade and view the users who are assigned the Global administrator role.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

#### Explanation:
